Experience

Frontend Developer

🏢 Savings United GmbH
📅 Jul 2023 - Aug 2024
📍 Remote

Savings United is a global team and a leader in couponing.

I worked in the agile White Labels team, implementing product features focusing on performance, SEO optimization, and delivering maintainable and scalable code.

From the first days, I partly used Acceptance Test-Driven Development (ATDD) to minimize bugs and ensure all necessary use cases were covered, leading to a more robust and reliable product.

I went beyond assigned tasks and created and contributed to the development of technical OKRs, with a strong emphasis on improving testing processes. As part of these OKRs, I shared knowledge and responsibilities with fellow developers, fostering a collaborative team environment.

Frontend Engineer, Scrum Master

🏢 Avito
📅 Oct 2016 - Apr 2022
📍 Moscow, Russia

Avito – the world's most visited classified ads website.

I worked on different products and projects (mostly with a focus on professional seller experience) on several platforms (avito.ru, pro.avito.ru, and their mobile versions).

My activity:

- As a **front-end engineer**, I wrote easy-to-support code using JS, Typescript, React, Redux, Jest, etc.
- As a **delivery lead** for some OKRs, I helped the discovery team to decompose projects by achievable goals, provided roadmaps and set plans for the dev team, helped to solve all problems and finally made releases happen on time.
- As a **technical owner** of one of the frontend-platforms, I provided reviews, solved other teams' concerns, managed the tech-backlog.
- As a **scrum master**, I created and improved various agile tools, scenarios, and checklists, contributed to the company's agile community.

Latest projects:

- Redesigning the user's profile page + getting rid of the legacy.
- Phone management flow on the user's settings page.
- User self-service statistics page.

Junior Frontend Developer

🏢 Ostrovok (hotel booking service)
📅 Aug 2016 - Oct 2016
📍 Moscow, Russia

Fixed issues and implemented features using Google Closure tools.

HTML/CSS Developer

🏢 Rutorika Digital Solutions
📅 May 2016 - Aug 2016
📍 Krasnodar, Russia

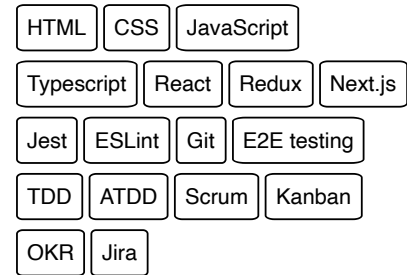

Converted designs to websites using Jade (Pug), BEM, and Gulp.

JS community

🏢 HTML Academy
📅 2017 - 2018

Mentored 5 students (HTML, CSS, basic JS).

Skills

English B2, Polish A1, Russian native

What I value most:

- dogfooding – to be an active user of what I am creating
- to work in a self-sufficient team
- small iterations of releases and low time to market
- transparency on all levels
- to implement good team practices: zero bug policy, working in pairs (research/code/testing), Acceptance Test Driven Development (ATDD), etc
- to contribute to the FrontOps - auto-tests, linting/formatting, bundlers, monitoring, CI/CD

Education

Advanced React Course

🏢 javascript.info
📅 05/2021

TypeScript Course

🏢 javascript.info
📅 04/2021

Basic JavaScript

🏢 HTML Academy
📅 03/2017
